

Uncovering the pro-tumourigenic role of innate immune regulators in cancer

Speaker :

Dr. Brendan Jenkins

Hudson Institute of Medical Research
Monash University, Melbourne

October 1, 2018 (Mon) 17:00~18:00

Meeting room, 4F Cancer Research Institute,
Kanazawa University

Dr. Brendan Jenkins clarified the role of innate immunity mediated by TLR2 in the development of gastrointestinal cancer for the first time (**Cancer Cell**, 2012). He is engaged in research on gastric cancer treatment with TLR2 inhibitors.

He is also vigorously promoting research on Carcinogenic induction mechanism by Stat3, which is an important inflammatory signal (**Clin Cancer Res**, 2018; **Cancer Res**, 2018).

At the seminar, Dr. Jenkins will introduce the latest findings about cancer, innate immunity, and inflammatory reaction. We look forward to your visit.
